

Fall 2017

General

- Added “Legacy Projections” and “Projections” sections to the file navigation dialog. The “Legacy Projections” section has the Annual Cash Flow Plan and Monthly Cash Flow Plan (FINFLO) tools that work the same as in previous releases. The “Projections” section has updated tools with new features such as...
 - Crop and Livestock budgets – Feed equivalents are no longer used. Specific crops are fed in a livestock budget. This carries through to the updated FINFLO component.
 - Cash Flow Projection (FINFLO) – The updated FINFLO component has the ability to do monthly plans using budgets, monthly plans without budgets, or multi-year annual plans. Legacy Annual Plans or FINFLO plans may be copied forward to this new component.
 - Long Range Planning (FINLRB) – The updated FINLRB component uses the new crop and livestock budgets that do not use feed equivalents.
- The new Projections section is currently available for agriculture files. This same feature will soon be available for commercial files.
- Added “Hay” crop to the list. No different from other hay crops, just less specific in the name. May be useful when switching to new projections that no longer use feed equivalents.

Detailed Balance Sheet

- Added columns for Purchase Price, Year Sold, and Sales Price in detail for machinery & equipment, titled vehicles, buildings, and land.
 - **These are optional entries, mainly for information purposes.** It is possible to use this information to complete capital purchases and sales detail in FINAN, Earned Net Worth Analysis, and Schedule F Cash to Accrual Analysis.
 - If Year Sold is entered for an item, this will remove the value of that item from the total. It is effectively the same as deleting the item from the list.
 - Any item with a Year Sold will not appear in the detailed schedule in the balance sheet output.
