# **ACKNOWLEDGEMENTS**

For making this report possible, a special thanks is owed to:

- the producers in the Southwest Minnesota Farm Business Management Association
- the hardworking staff of the Southwest Minnesota Farm Business Management Association (Garen, Tonya, Nick, and Gretchen)
- the board of the Southwest Minnesota Farm Business Management Association
- Rann Loppnow - Software Developer at the Center for Farm Financial Management
- Katie Nichols - Administrative Associate at the Center for Farm Financial Management

This report was partially funded by a Farm Business Management and Benchmarking Grant from the United States Department of Agriculture (USDA) National Institute of Food and Agriculture (NIFA).

## **ABOUT THE SOUTHWEST MINNESOTA FARM BUSINESS MANAGEMENT ASSOCIATION**

The [Southwest Minnesota Farm Business Management Association](#) is a membership-led organization of farms throughout southwestern Minnesota. The focus is entirely on improving members' farm financial management skills, knowledge, and success. The association provides members with analysis, confidential peer farm benchmarking, individual consultations and direct connections to University research and expertise.

### **ASSOCIATION OFFICERS**

John Volk, President  
Ryan Larson, Vice President  
Jeffery Leuthold, Treasurer

### **ASSOCIATION DIRECTORS**

Matthew Grussing, Russell Gundermann, Matt Lund, Jesse Nantkes, Jason Tibodeau, and Alan Vander Lugt

# ABOUT THE DATA

The map below visualizes the number of analysis records from the various counties in the association that are included in this year's report.

Table I. Distribution of Farms and Analyses by County

County	# of Farm Units	# of Analysis Records Submitted
Cottonwood	13	13
Fairbault	2	2
Jackson	19	16
Lyon	2	2
Murray	16	15
Nobles	23	19
Pipestone	12	12
Redwood	8	8
Rock	3	5
Wabasha	3	3
Watonwan	7	5
Others	10	11

Table II. Summary Statistics of the 2022 Data

<b>Metric</b>	<b>Mean</b>	<b>Median</b>
Gross Accrual Farm Revenue	\$1,520,585	\$898,109
Gross Cash Farm Revenue	\$1,402,893	\$769,708
Gross Crop Revenue	\$847,103	\$634,553
Gross Livestock Revenue	\$511,103	\$0
Accrual Net Farm Income	\$365,846	\$263,512
Ending Debt to Asset Ratio (assets at market values)	36%	32%
Total Crop Acres	863 acres	690 acres
Operator Age	55 years	56 years
Years Farming	31 years	34 years
Reported Family Living Expense	\$86,541	\$75,872
Ending Farm Assets (assets at market values)	\$4,927,024	\$3,879,063

Table III. Distribution of Farms in the Report Across Various Groupings

<b>Group Category</b>	<b>Category Groups</b>					
<b>Gross Farm Revenue</b>	<b>&lt;\$250K</b>	<b>\$250-\$500K</b>	<b>\$500K- \$1M</b>	<b>\$1-2M</b>	<b>&gt;\$2M</b>

# of Farms	80	5	26			
% of All Farms	72%	5%	23%			
<b>Crop Acres</b>	<b>&lt;100 acres</b>	<b>101-250 acres</b>	<b>251-500 acres</b>	<b>501-1,000 acres</b>	<b>&gt;1,000 acres</b>	
Number of Farms	11	10	19	42	29	
% of All Farms	10%	10%	17%	38%	19%	
<b>Debt-to-Asset Ratio</b>	<b>&lt;20%</b>	<b>20%-40%</b>	<b>40-60%</b>	<b>60-80%</b>	<b>Other*</b>	
# of Farms	27	45	28	8	3	
% of All Farms	24%	41%	25%	7%	3%	

\* farm type is determined by which revenue type comprises 70% or greater of gross farm revenue

\*\*A farm type of 'Other' includes all farm types outside of crop, and crop and beef farms in this case

# **ABOUT THIS REPORT**

**Title:** 2022 Annual Report of the Southwest Minnesota Farm Business Management Association.

**Authors:** Devin L. Brand<sup>1</sup>, Pauline A. Van Nurden<sup>1</sup>, Garen J. Paulson<sup>2</sup>, Tonya L. Knorr<sup>3</sup>, Nick Sandager<sup>3</sup>, and Dale W. Nordquist<sup>1</sup>.

This report summarizes the individual farm records of the members of the Southwest Minnesota Farm Business Management Association for 2022.

Whole-farm information and enterprise costs and returns are reported. The year-end analysis of the individual farms was performed by the Association field staff using the FINPACK software from the [Center for Farm Financial Management](#). The individual analyses were summarized at the University of Minnesota Department of Applied Economics using RankEm Central. In addition to the average of all farms, the averages for the high and low-income groups are also presented. The reports are divided into four major groups: whole-farm information, crop enterprises, livestock enterprises, and summary information. The summary information includes whole-farm historical trends and information by farm size, farm type, debt-to-asset ratio, and operator age.

Of the 118 farms in the Southwest Association, the data for 111 farms are included in this report. The rest were omitted because the records were incomplete at the time of the preparation of this report. In addition to this report, members receive an annual farm business analysis, on-farm instructional visits, end-of-year income tax planning and preparation, periodic meetings, tours and seminars, a monthly newsletter, and other managerial and educational assistance. Each farmer pays an annual fee which covers the cost, with the balance defrayed by the University of Minnesota Extension and research programs of the University of Minnesota.

The livestock enterprise summaries include data from both Southwest Minnesota Farm Business Management (FBM) Association farms and Minnesota State Farm Business Management program farms. This provides a greater number of instances for each enterprise with the goal of providing more accurate benchmark information. Minnesota State FBM programs are distributed across the state and include over 2,400 participating farms.

For those interested in diving deeper into the data from this report or for farm finances in general, [FINBIN](#)<sup>4</sup> is a publicly available benchmarking database with a wealth of farm financial and production information. Numerous whole-farm and crop/livestock enterprise, and panel reports are available in FINBIN<sup>4</sup>. The data undergoes multiple thorough integrity and quality checks before being aggregated and anonymized into the database.

# THE YEAR IN BRIEF

2022 was a year full of uncertainty, volatility and risk. Commodity markets experienced dramatic disruptions due to multiple global events. Subsequently, producers in the United States experienced strong commodity prices. For producers in the Southwest Minnesota Farm Business Management Association (SWMFBMA), compared to 2021, gross crop income increased 5% and gross livestock income increased 13%. Strong commodity prices translated to higher feed costs for livestock producers. Even with higher feed costs, livestock producers were still able to have a profitable year, although their profits were down from the tremendous levels in 2021.

Weather extremes seem to occur more frequently. Across the geographical area of the association, and most of Minnesota, drought plagued the 2022 growing season. Despite the dry conditions, crop yields remained at reasonably strong levels. Corn yields increased 4% compared to the 10-year average. Soybean yields did not fare as well as they were 3% below the 10-year average.

Inflationary pressures continued to impact nearly every aspect of life for both consumers and agricultural producers. Input costs were an example of shocking price increases as products such as fertilizer and crop chemicals saw incredible price jumps during the 2022 growing year. Across the association, cash operating expense increased by 15% year-over-year (YOY). When looking on an accrual-adjusted basis (when accounting for inventory changes), the increase in operating expenses was actually 18% YOY.

Despite all of these macroeconomic threats and challenges, producers in the SWMFBMA managed to have an impressive year in 2022 in terms of profitability. **The average net farm income for the 111 farms included in this report was \$365,846.** This did represent a 23% decrease from the prior year, however 2022 still ranked as the 5th most profitable year over the past two decades for the association (when adjusted for inflation).

Beef producers in Minnesota saw profits increase nearly 30%, buoyed by strong cattle sale prices in 2022. Minnesota dairy producers overcame an increase in their average costs per cow (+\$790) thanks to increased milk prices (+\$5.73/cwt) to increase their profits over 30%. Hog producers in the state had a more challenging year as they saw their profits decrease 62% YOY.

Producers saw drastically lower amounts of government payments in 2022. Compared to 2020, government payments were down more than \$160,000. In 2022, government payments represented just over 1% of gross farm income (compared to 14% in 2020 and 5% in 2021). The payments received in 2022 largely were a final round of drought-related assistance from previous production years. There was also some minimal pandemic-related relief received by some farms.

With uncertainty and risk in the world of agriculture (and the world at large) that is not expected to decrease anytime soon, producers in the association worked hard to enhance their ability to weather a potential financial storm through increasing their working capital (a measure of liquidity), their debt-to-asset ratio and repayment capacity, and their net worth or equity in their farming operations. As we enter the 2023 production year, the worry of 'sticky' high operating expenses and potentially decreasing commodity prices weigh heavily on the minds of producers.

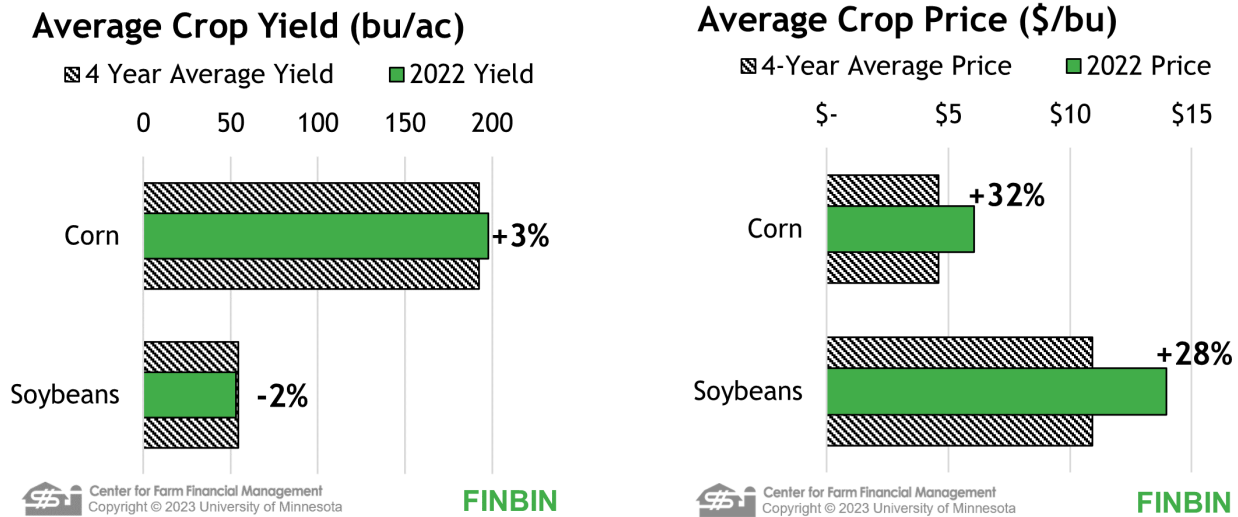

# THE STORY OF FARM FINANCES IN 2022

## FARM REVENUE

In agriculture, revenue, at its most essential level, is comprised of production and price.

### CROP PRODUCTION AND PRICES

The charts below compare average crop yields and prices from for corn and soybeans.

Crop yields were excellent for association members in 2022. Corn yields averaged 198 bushels per acre (bu/acre), down 2 bushels from 2021. Soybeans did not fare as well, falling from 58 bu/acre in 2021 to 53 bushels in 2022. Crop sale prices were strong in 2022. Corn cash sale prices averaged \$6.06 per bushel, compared to \$4.84 in 2021. Soybean prices averaged \$13.97 per bushel, compared to \$11.59 the prior year.

### LIVESTOCK PRODUCTION AND PRICES

Table IV. Livestock Production and Prices in 2022 for Various Enterprises

	Average Production			Average Price		
	2022	4-Yr Avg	% Change	2022	4-Yr Avg	% Change
Beef Cow-Calf (lbs weaned /cow and \$ /cwt*)	445	450	-1%	\$177.59	\$157.58	+13%
Beef Finishing (sales weight and \$/cwt*)	1,407	1,424	-1%	\$145.89	\$122.78	+19%
Dairy (lbs milk /cow and \$/cwt* milk)	25,388	24,977	+2%	\$24.31	\$20.33	+20%
Hogs (sales weight and \$/head)	211	205	+3%	\$69.63	\$60.35	+15%
Sheep (sales weight and \$/cwt*)	116	126	-8%	\$195.91	\$191.63	+2%

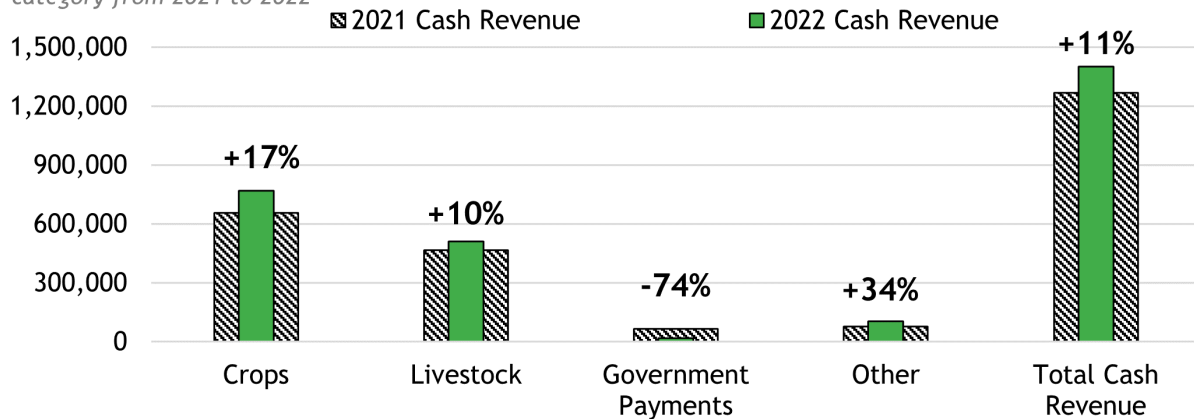

\*cwt = one hundred pounds

The change in average livestock production was mixed across several enterprises from 2021 to 2022. Sheep saw a substantial decline in average sales weight of 8% while hogs and dairy saw slight increases in their average production per unit. All of the livestock enterprises above saw improved prices with the increases ranging from 2% (sheep) to 20% (dairy).

Although typically smaller in quantity, there are regularly other sources of revenue for a farm. The chart below displays cash farm revenue categories in 2022 and 2021, and the percentage change in those categories from 2021 to 2022.

### Primary Cash Farm Revenue Sources (\$)

This chart shows the total dollars for each category in 2021 and 2022, and the percent change in each category from 2021 to 2022

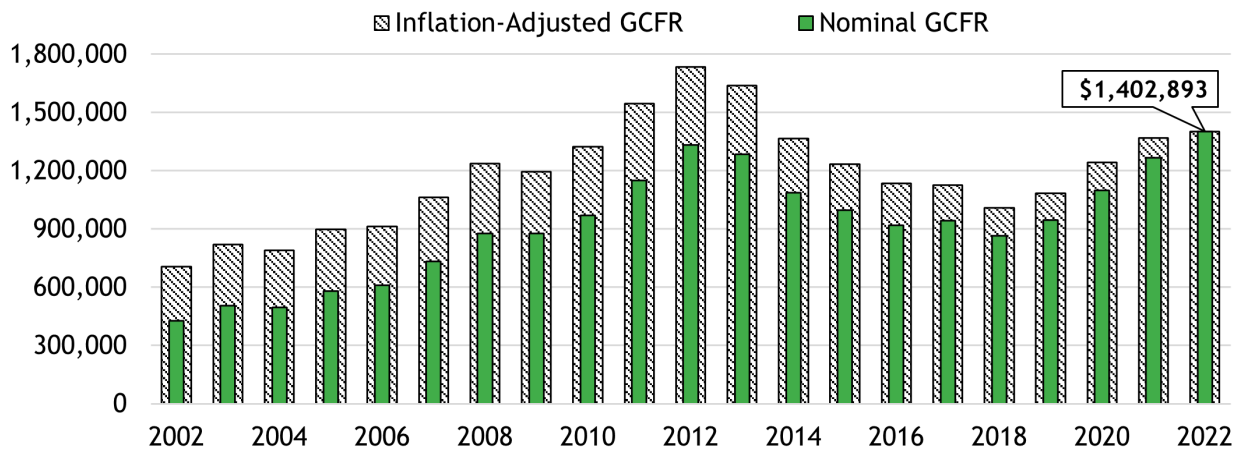

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

FINBIN

When it comes to revenue sources, the starkest change from 2021 to 2022 was in the amount of government payments received. In 2022 farms in the association received 74% fewer government payments. Crop income jumped 17% and livestock revenue increased 10% on a cash basis.

The chart below displays the average gross cash farm revenue for association farms from 2002 to 2022.

### Gross Cash Farm Revenue (GCFR) (\$)

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

FINBIN

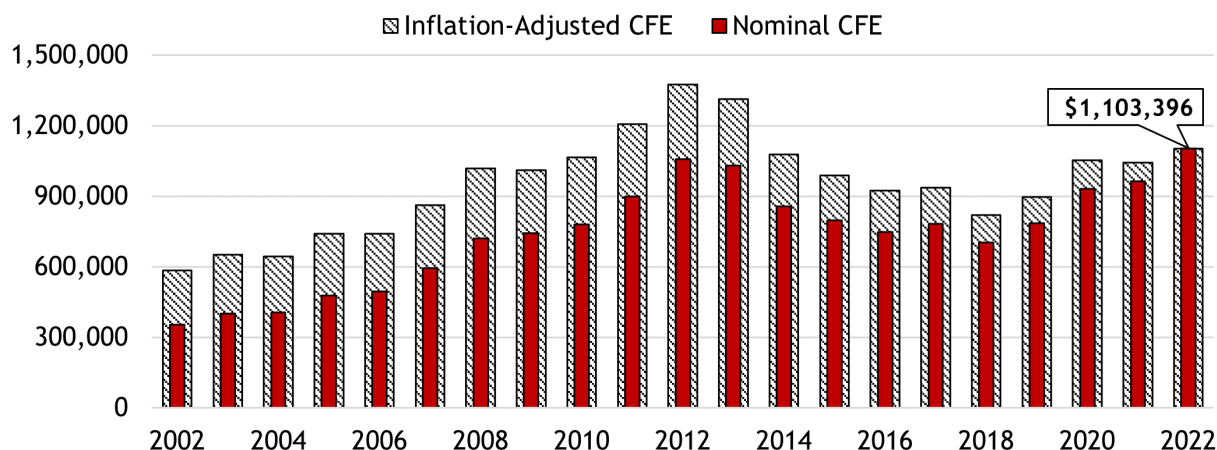

Gross cash farm revenue increased more than 10% in 2022.

## FARM EXPENSE

### INCREASED FARM COSTS

Agricultural producers experienced increased expenses in 2022. The chart below displays the total cash farm expense for farms in the association from 2002 to 2022.

### Total Cash Farm Expense (CFE) (\$)

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

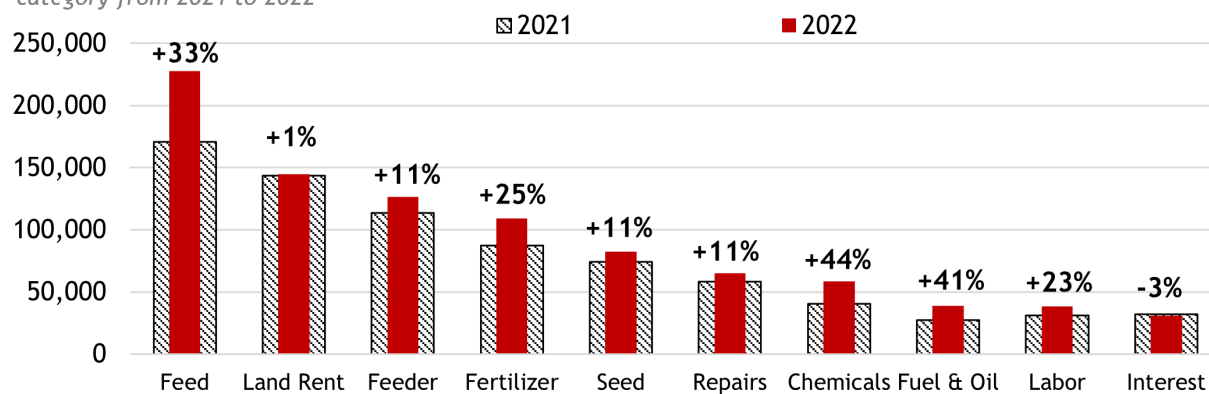

FINBIN

The average farm saw increased operating expenses last year. Cash operating expenses were up 15% and accrual-adjusted<sup>1</sup> expenses were up 18%. 2022 was the highest total cash farm expenses seen over the past two decades on a nominal basis. However it was not the highest on an inflation-adjusted basis.

The chart below displays the 10 largest cash farm expense categories in 2022 and 2021, and the percentage change in those categories from 2021 to 2022.

### 10 Largest Cash Farm Expense Categories (\$)

*This chart shows the total dollars for each category in 2021 and 2022, and the percent change in each category from 2021 to 2022*

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

FINBIN

Feed, land rent, feeder purchases, and fertilizer were the 4 largest expense items in 2022 on average. Chemicals, fuel and oil, feed, and fertilizer experienced the largest percentage changes from 2021 to 2022.

<sup>1</sup> Accrual-adjusted here means changes in inventories for expense items have been accounted for

### BENCHMARKING 2022 EXPENSES

Benchmarking is the comparison of a metric or measure to a standard. This enables the determination whether the said measure falls into a strong range, or perhaps is at a vulnerable level.

The chart at the right displays the operating expense ratio (which shows the farm portion of income that is used to pay operating expenses, excluding interest and depreciation) and benchmarks it to a standard set of strong, acceptable, and vulnerable ranges.

In 2022, the operating expense ratio was 69%, meaning 69% of farm income went towards operating expenses. This ratio level is slightly above the strong benchmark level of 60% or less, but is lower than the vulnerable range of 80% and greater.

### Benchmarking the Operating Expense Ratio

■ Strong ■ Acceptable ■ Vulnerable ■ 2022

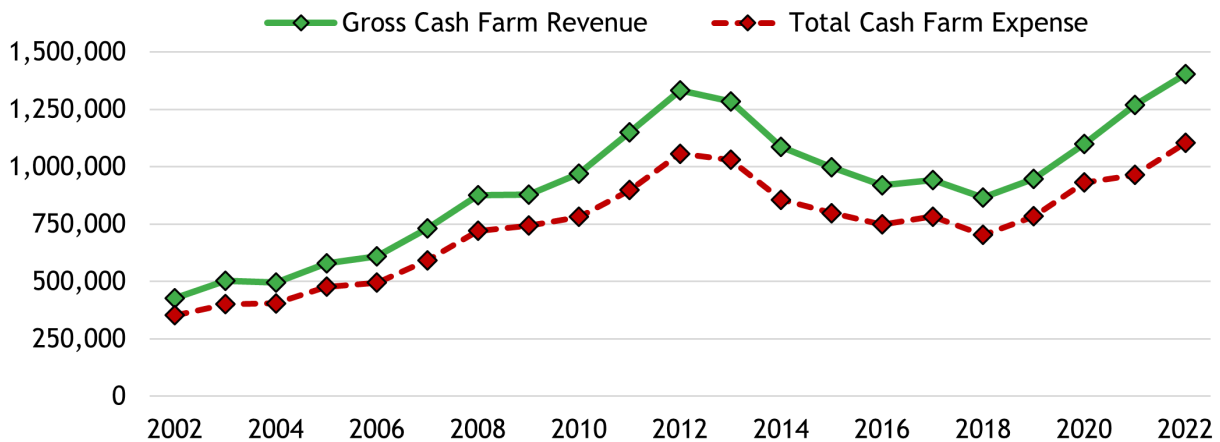

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota  
**FINBIN**

### COMPARING FARM REVENUE AND FARM EXPENSE

Profit, at the essential level, is equal to revenue minus expenses. Therefore it is important to compare farm revenue and expenses and see how their relationship has changed over time.

The chart below displays the gross cash revenue and total cash farm expense since 2002.

### Gross Cash Revenue and Total Cash Farm Expense (\$)

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

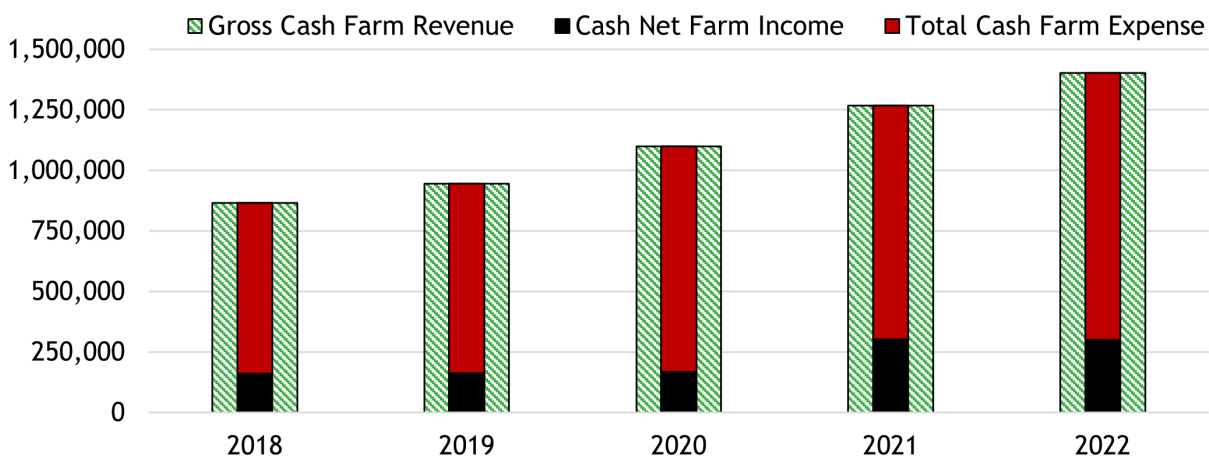

**FINBIN**

## NET FARM INCOME

### CASH NET FARM INCOME

Subtracting the total cash farm expense from gross cash revenue, we derive net cash farm income. The chart below displays the average cash net farm income (as well as average gross cash farm revenue and total cash farm expense) over the past five years.

### Average Cash Net Farm Income (\$)

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

FINBIN

While gross revenue was higher, net cash farm income in 2022 was slightly lower than 2021, dropping around 1%.

### ACCURAL NET FARM INCOME

Oftentimes in farm finance, accrual net farm income figures are discussed and focused on more than cash net farm income. But why? Accrual adjustments (accounting for changes in inventories) allow us to more accurately measure the value of production in an analysis year as well as to see the true cost of generating that production. Below find the calculation of accrual net farm income as well as a breakdown of the components of the accrual net farm income over the past 5 years.

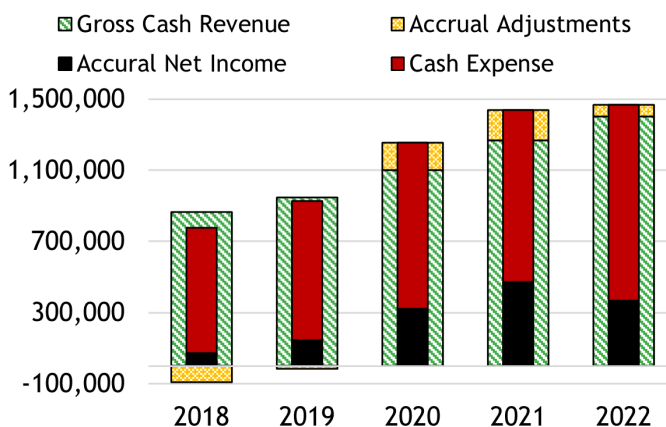

### CALCULATING ACCURAL NET FARM INCOME

Gross Cash Farm Income/  
Revenue  
(-) Total Cash Farm Expense  
= Cash Net Farm Income

Cash Net Farm Income  
(+/-) Changes in Inventory  
(-) Depreciation & Capital Adj.  
(+/-) Gain or Loss on Capital Sales  
= **Accrual Net Farm Income**

Accrual Adjustments

### Accrual Net Income Components (\$)

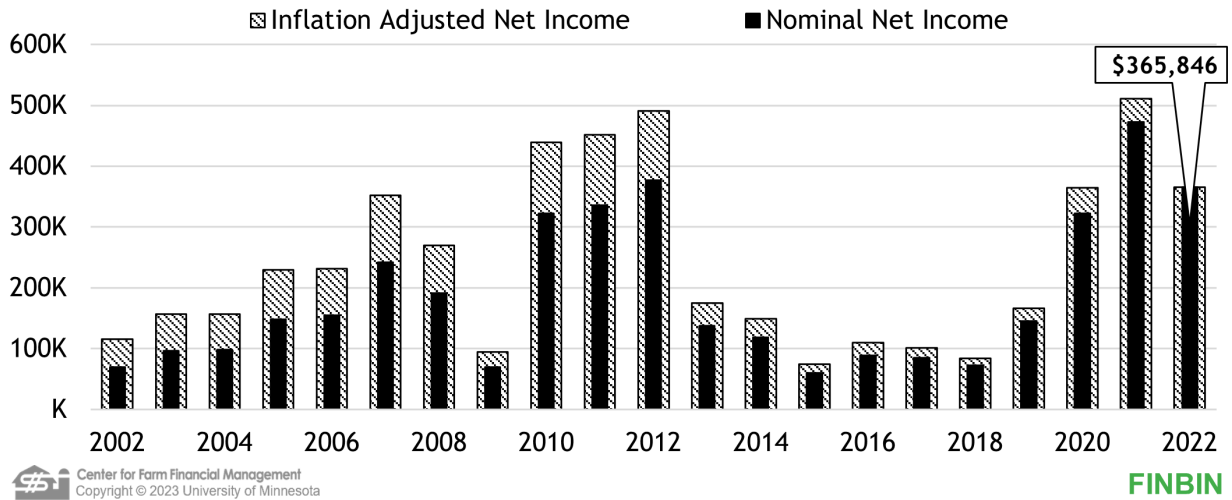

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

FINBIN

### CHANGES IN ACCRUAL NET FARM INCOME OVER TIME

The chart below displays the average accrual net farm income since 2002 in both nominal and inflation-adjusted dollars.

### Average Accrual Net Farm Income (\$)

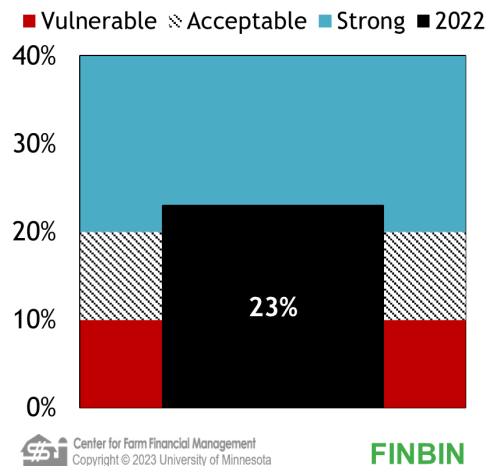

The change in **average** accrual net farm income for farms in the association in 2022 from 2021 was a decrease of 23%. The nominal (non-inflation adjusted) net income for the average farm in 2022 was \$365,846, compared to \$473,185 the previous year. The change in **median<sup>1</sup>** accrual net farm income for farms in the association in 2022 from 2021 was a decrease of 13%. In 2022 the median net farm income was less than the average net farm income, illustrating how averages can be skewed in high income years. It is common in high profit years for the average net farm income to be skewed higher by the substantial profits of larger operations.

### BENCHMARKING 2022 NET FARM INCOME

Despite the large drop, 2022 was still a quite strong year in terms of net income and profitability. 2022 saw the 5th highest average inflation-adjusted net farm income in the past 20 years. The top-5 years in terms of inflation-adjusted net farm income, in order, are 2021, 2012, 2011, 2010, and 2022.

A good metric to utilize when examining farm finances is the net farm income ratio. This ratio compares farm profit to gross farm revenue. It shows how much is left after all farm expenses (except for unpaid operator labor and management) are paid. A net farm income ratio of 20% is considered strong and in 2022 this ratio was 23%. Although down from 2021, this is still a quite strong position.

### Benchmarking the Net Farm Income Ratio

<sup>1</sup> The median accrual net farm income is the income amount that divides the data in two equal groups, with half of farms having net incomes above that amount, and half the farms having an income less than that amount

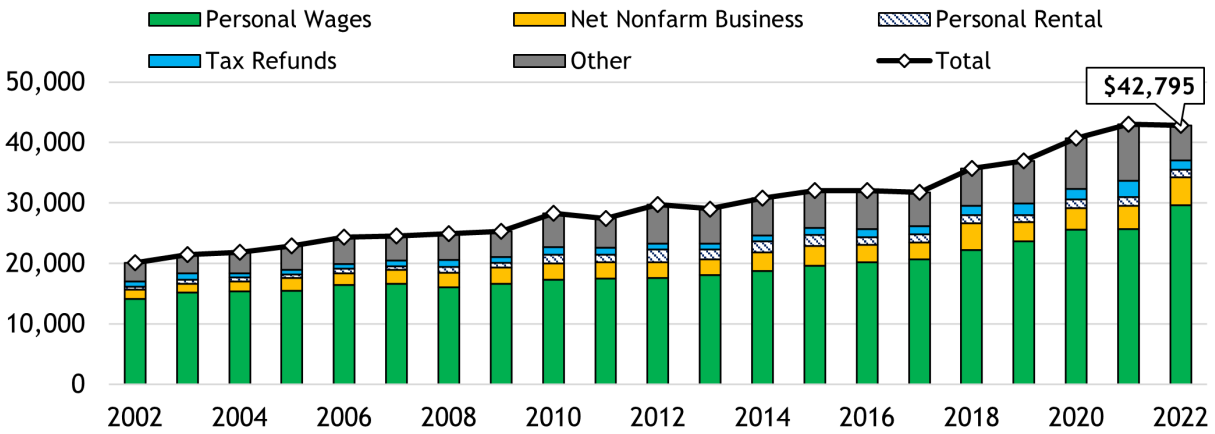

# NonFARM

## Nonfarm Income

The chart below displays the average nonfarm income and the amounts from various categories of nonfarm income. The average nonfarm income in 2022 for farms in the association was \$42,795 with \$29,604 of that being made up of personal wages and salary income.

### Nonfarm Income Trend (\$)

*Data from farms with detailed family living records*

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

**FINBIN**

## NONFARM EXPENSE

A significant use of net farm income is covering family living costs as well as income taxes. Therefore, it is important to analyze non-farm expenses for association farms. The chart below illustrates how non-farm expenses have trended over the past twenty years.

### Nonfarm Expense (\$)

*Data from farms with detailed family living records, excluding savings and investment, and non farm real estate purchases*

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

**FINBIN**

The average nonfarm expense (excluding nonfarm savings and investment, as well as nonfarm real estate purchases) was \$117,172 in 2022. This amount was comprised of \$69,517 of family living costs (think food, medical, clothing, etc.), \$39,474 of income taxes, and \$8,181 of other nonfarm expenditures (such as household furnishing, nonfarm vehicle purchases, nonfarm real estate purchases, etc.). Since 2002, the average family living cost has been \$59,188.

### CHANGES IN NONFARM EXPENSES

The chart to the right displays major nonfarm expense categories for 2021 and 2022, and the percent change in those categories.

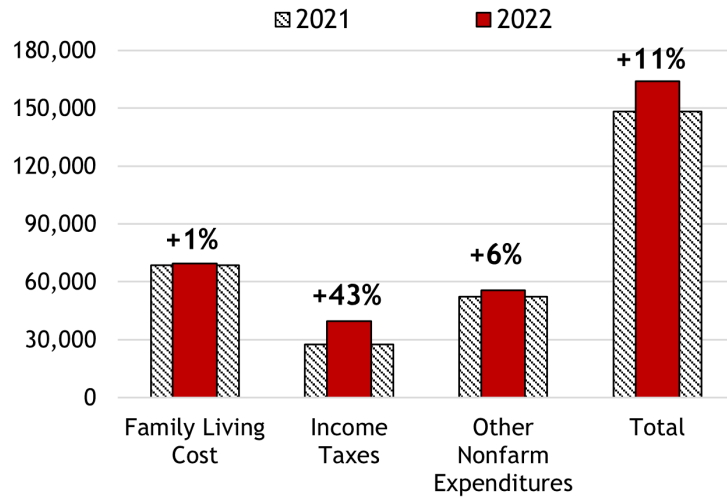

Despite inflationary pressures present in the broader U.S. economy, the average family living cost increased only 1% in 2022 compared to 2021. Again, note this is for farms in the association keeping detailed family living financial records.

As expected in a year with strong profitability, income taxes jumped in 2022, being 43% higher than 2021.

Other nonfarm expenditures increased slightly, coming in 6% higher in 2022 than the previous year.

### Nonfarm Expenses (\$)

Data from farms with detailed family living records, this chart shows the total dollars and percent change in each category from 2021 to 2022

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

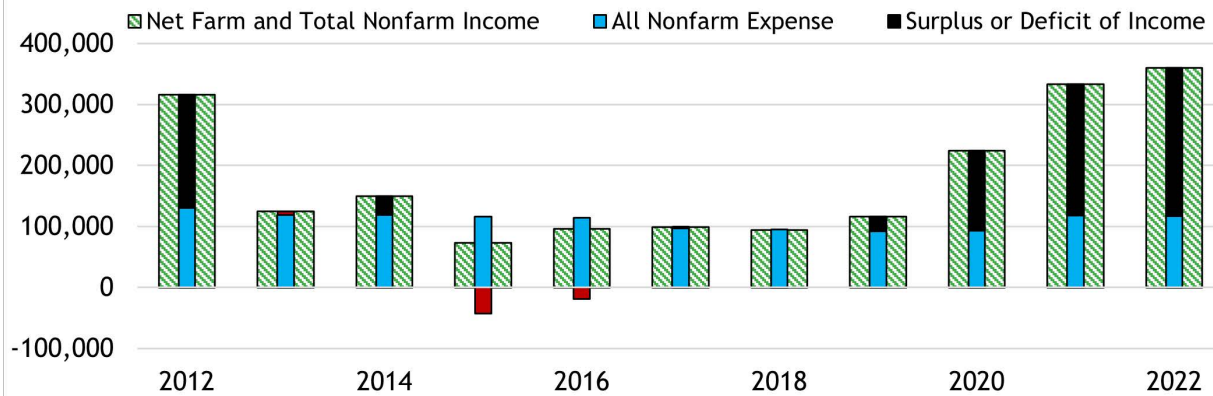

FINBIN

### COMPARING TOTAL (FARM & NONFARM) INCOME TO TOTAL (FARM & NONFARM) EXPENSE

The chart below illustrates the difference between total income (net farm and total nonfarm) (in green shading), total nonfarm expense (in blue), and the difference illustrated by black or red bars. A red bar indicates in that particular year the total nonfarm expense is greater than the net farm and nonfarm income.

### Comparing Total Income to Total Expense (\$)

Red (negative) bars indicate years when total nonfarm expense exceeded net farm and total nonfarm income

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

FINBIN

In 2022, the difference between total income and total expense was \$242,996 which was the highest amount seen in the past decade. Since 2020 this 'surplus' has grown steadily after farms in the association saw 4 out of 6 years between 2013 and 2019 with nonfarm expenses exceeding total income.

## THE FARM BALANCE SHEET

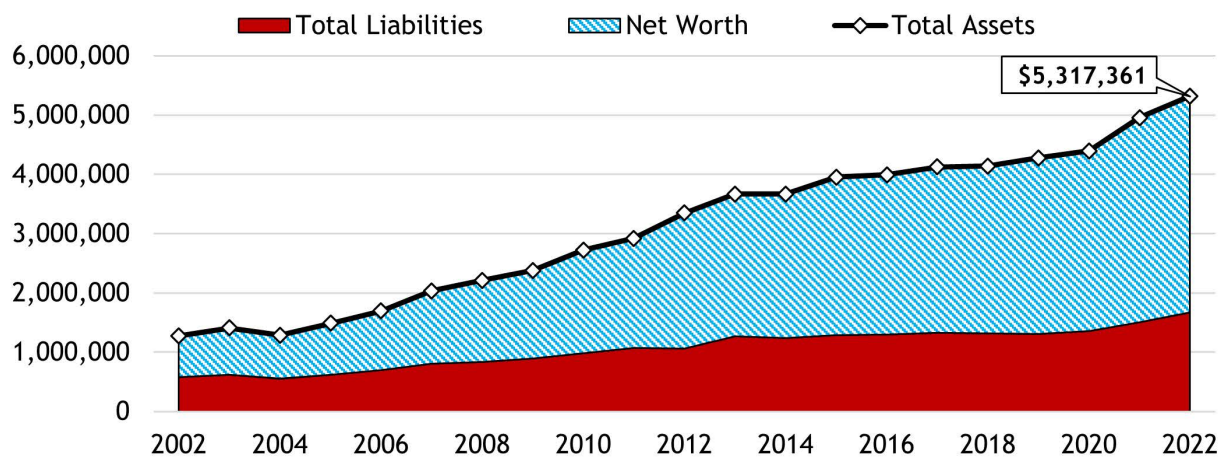

### THE VALUE OF ANALYZING THE BALANCE SHEET

A balance sheet, which is a snapshot of financial position at a particular point in time, can provide a vast amount of valuable information. Insight regarding solvency and liquidity as well as operation size can be gleaned from reviewing the balance sheet. A balance sheet is comprised of assets, liabilities, and equity (or net worth). Assets and liabilities can be broken into current, intermediate, and long-term categories. Total assets is equal to total liabilities plus equity or net worth. Total assets can also be utilized as a proxy for farm size.

### CHANGES IN THE AVERAGE BALANCE SHEET

The chart below shows how the balance sheet of the average farm in the association has changed over time.

### Farm Balance Sheet (\$) [sole proprietors only]

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

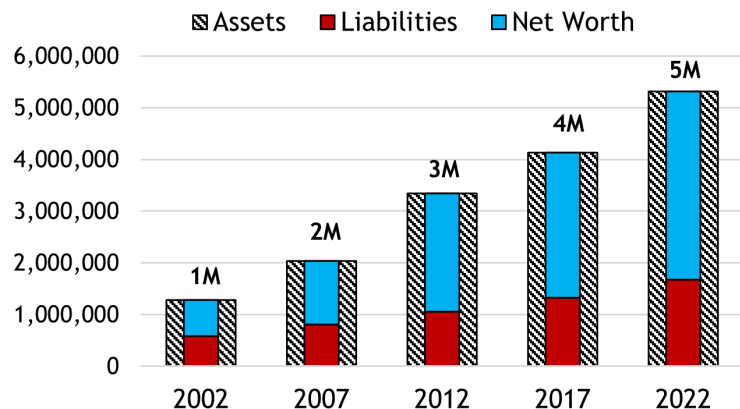

FINBIN

In 2022, the average farm has a total asset level of \$5,317,361, representing an increase of 7% from 2021. The average farm had total liabilities of \$1,669,413 which was an 11% increase. The average net worth or equity increased 6% or \$200,417. Since 2012, total assets have increased by 59% while total liabilities increased by 58%. The average net worth increased by 60%.

The chart to the right displays the total assets, liabilities, and net worth for the average farm across 5-year increments.

The balance sheet for the average farm in the association has grown dramatically over the past twenty years. Total assets increased 316% from 2002 to 2022 while total liabilities grew 189% over that same time. The average net worth increased by more than 420%.

### Evolution of the Balance Sheet (\$)

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

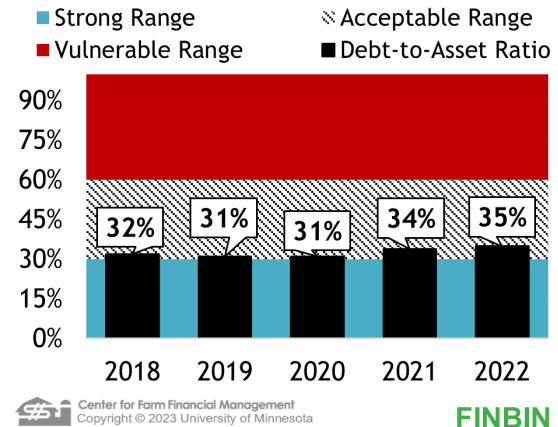

FINBIN

## LOOKING AT FARM SOLVENCY

Solvency represents the ability of the farm business to meet all of its debt obligations if its assets were sold at the current point in time. A common metric used for measuring solvency is the Debt-to-Asset Ratio. As the chart to the right shows, in 2022, the average debt-to-asset ratio was 35%, a 1% increase from 2021. Since 2002, the average debt-to-asset ratio for association farms has fallen in the acceptable benchmark range.

The debt-to-asset ratio compares total farm assets to total farm debt or liabilities. A higher ratio indicates greater financial risk and lower borrowing capacity.

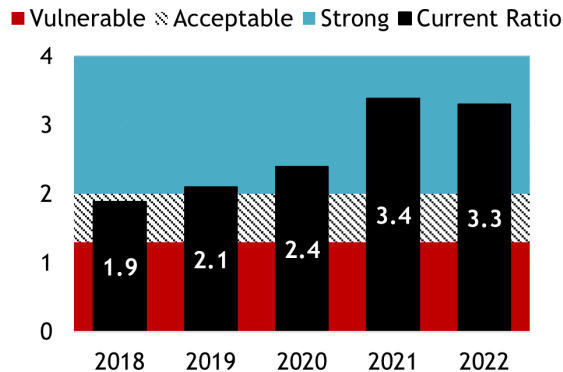

## Debt-to-Asset Ratio

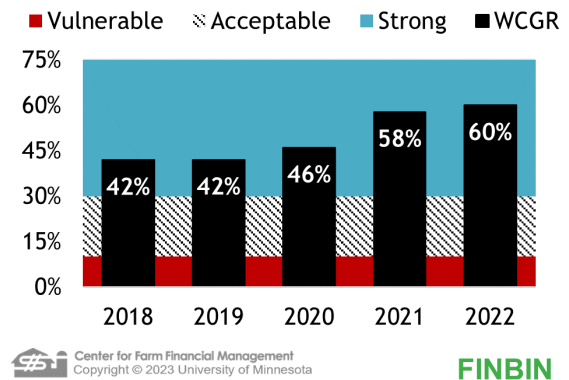

## LOOKING AT FARM LIQUIDITY

Liquidity is the ability of the farm business to meet financial obligations as they come due or to generate enough cash to pay for family living expenses, taxes, and to make one-time debt payments. Three metrics used to assess liquidity are current ratio<sup>1</sup>, working capital-to-gross revenue<sup>2</sup> and working capital-to-operating expense<sup>3</sup>.

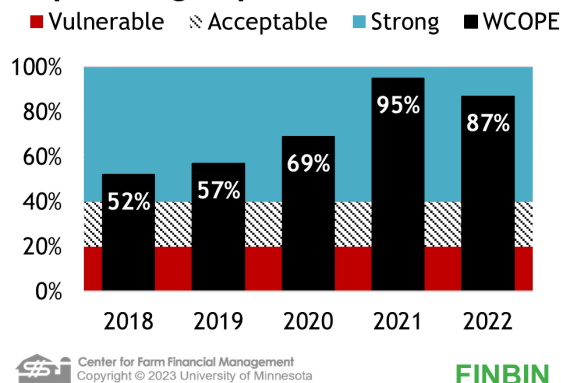

## Current Ratio

## Working Capital to Gross Revenue (WCGR)

## Working Capital to Operating Expense

1 - Current ratio compares current assets against current liabilities

2 - Working capital-to-gross-revenue shows working capital as a percentage of gross farm revenue. Measures the available operating capital against the size of the business.

3 - Working capital-to-operating expense shows working capital as a percentage of farm operating expense (excluding depreciation and amortization). Measures the operating capital available against the amount of the operating expenses.

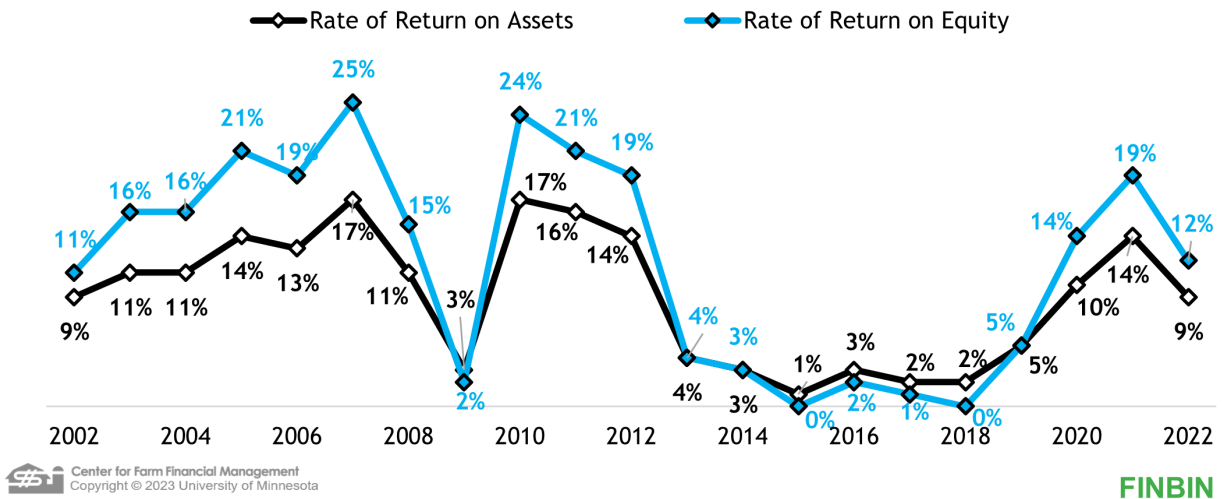

## FARM PROFITABILITY METRICS

### OTHER MEASURES OF FARM PROFITABILITY

Net farm income is not the only measure or metric that can be used to assess farm profitability. Two other frequently used metrics are the rate of return on assets (ROA) and the rate of return on farm equity (ROE).

The ROA can be thought of as the 'interest' rate being earned on all investments in the farm (both the farmers' and the creditors' investments). The ROE represents the 'interest' rate being earned on the farmers' investment in the farm operation. This return can be compared returns available if the equity in the farm had been invested elsewhere such as the stock market or a certificate of deposit. ROE and ROA trends over the past 20 years are shown in the chart below.

### Rates of Return on Assets (ROA) & Equity (ROE)

FINBIN

Evaluating the relationship between ROA and ROE is valuable. If the ROA is greater than the ROE, then the average producer lost money on borrowed capital. When ROE is greater than ROA, borrowed capital earned more than it cost (the ROA was higher than the interest rate on the borrowed capital).

The chart to the right illustrates the difference between ROE and ROA for association farms since 2002. Red bars indicate years where the ROE was less than the ROA.

After several challenging years from 2013 through 2019, farms have seen improved profitability when looking at these two metrics.

### Difference Between ROE and ROA

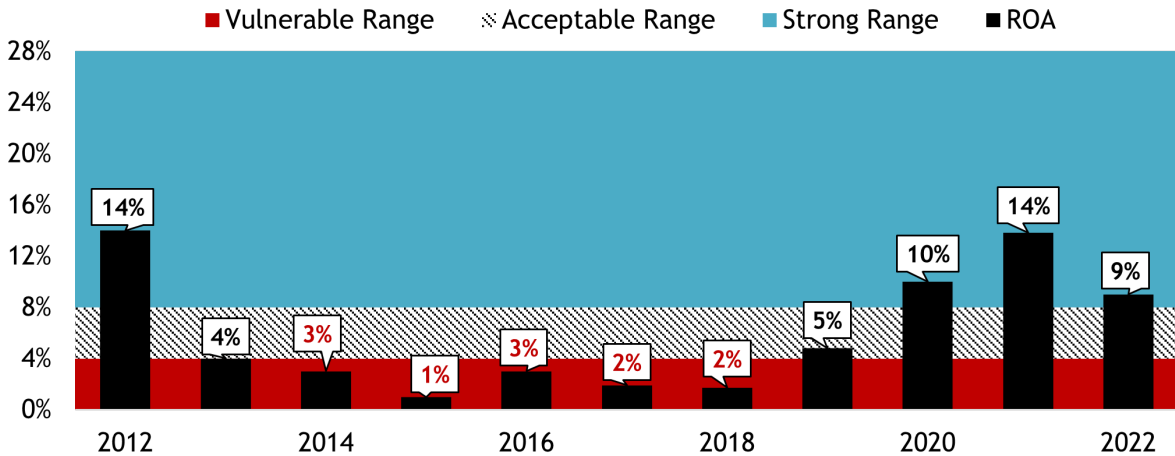

Center for Farm Financial Management

FINBIN

## BENCHMARKING RETURN ON ASSETS AND RETURN ON EQUITY

As with any metric it is valuable to benchmark these profitability measures against some standard ranges. The charts below show how the average ROA and ROE have compared to standard benchmark ranges over the past decade.

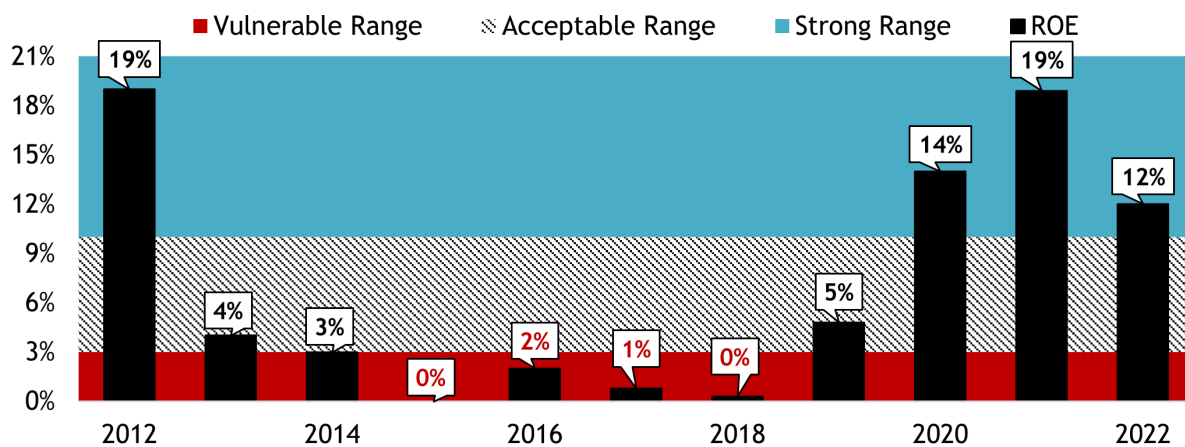

### Rate of Return on Assets (ROA)

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

FINBIN

### Rate of Return on Equity (ROE)

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

FINBIN

The past three years have been a welcome improvement in terms of profitability after several consecutive challenging years. In 2022, the average ROA and ROE were down slightly from there 2021 levels. However, both metrics still fell comfortably in the strong benchmark ranges.

## REPAYMENT CAPACITY

### DEFINING REPAYMENT CAPACITY

Repayment capacity is another aspect of financial position and performance. Repayment capacity is a borrower's (such as a farm's) ability to repay debts on-time. It does include nonfarm income and as such is not a measure of business performance alone. Two common metrics of repayment capacity are the debt coverage and term debt coverage ratio.

The debt coverage ratio (DCR) indicates whether enough income was generated to cover current interest expense and all intermediate and long-term debt payments. The term debt coverage ratio (TDCR) indicates whether enough income was generated to cover all intermediate and long-term debt payments (does not include current interest).

The charts below illustrates the DCR and the TDCR for association farms over the past decade and compares it to standard benchmark ranges.

### Debt Coverage Ratio

### Term Debt Coverage Ratio

2022 was a year of continued strong debt coverage ratios. Although both the term debt coverage ratio and the debt coverage ratio were lower compared to 2021, they were equal to the levels seen in 2020 and comfortably in the strong benchmark range.

## COMPARISONS ACROSS FARM TYPES

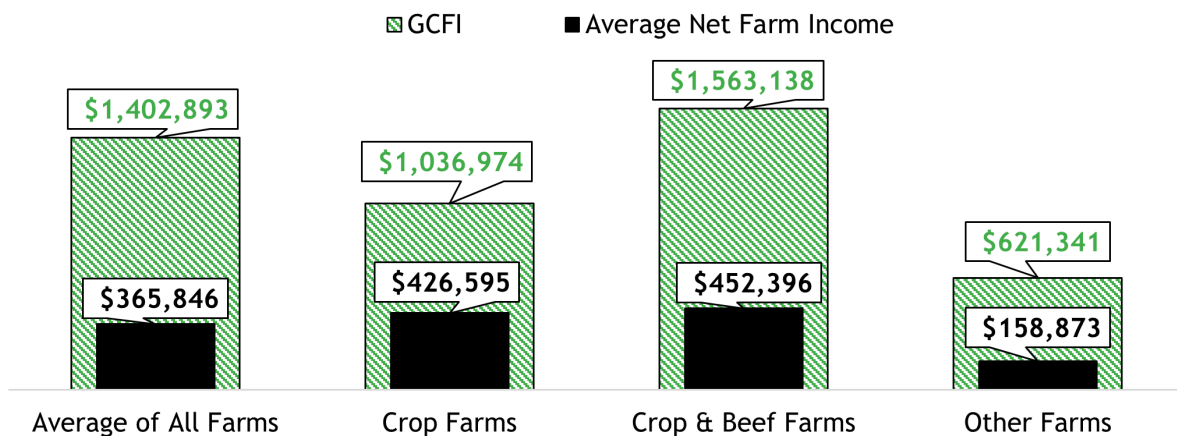

### WHY COMPARE FARM TYPES

As with any metric, the average net farm income for association farms covers a lot of the variation present in farm finances. For example, with high crop prices crop farms can have a very strong year. At the same time, livestock operations could have a challenging year with the high feed prices resulting from increased crop prices. As such, it is always a good practice to compare the various farm types present in the association.

### INCOME ACROSS FARM TYPES<sup>1</sup>

The chart below displays the average gross cash income and net farm income (accrual) for the various farm types. Note that only farm types with sufficient sample size are included below.

### Gross Cash and Net Accrual Income by Farm Type

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

**FINBIN**

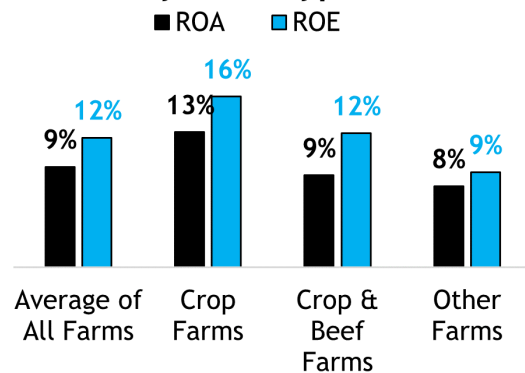

The average net accrual income for the 80 crop farms in the database was \$426,595, down 6% from 2021. For this farm type, gross cash income was up 15% in 2022. Even though gross income was higher, the increase in operating expenses contributed to the slightly lower net income. Crop and beef farms had the highest average net income of any of the farm types with sufficient sample size in 2022.

### RETURNS ACROSS FARM TYPES

The chart to the right displays the return on assets (ROA) and return on equity (ROE) for the various farm types compared to the average for all farms.

All farm types shown experienced ROEs greater than their ROAs indicating borrowed capital earned more than it cost. All farms saw ROAs that fall into the strong benchmarking range. Other farms are the only type that had an ROE slightly outside of the strong benchmarking range.

### Returns by Farm Type

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

**FINBIN**

<sup>1</sup>

\* farm type is determined by which revenue type comprises 70% or greater of gross farm revenue

\*\*A farm type of 'Other' includes all farm types outside of crop, and crop and beef farms in this case

## COMPARISONS ACROSS FARM SIZE

### INCOME ACROSS FARM SIZES

The chart below displays the average gross cash income and accrual net income for the farm size groups that had sufficient sample size to include in this report. Note that the farm size groups are based on the dollars of gross revenue.

### Gross Cash and Net Accrual Income by Farm Size (\$)

Center for Farm Financial Management  
Copyright © 2023 University of Minnesota

Farm Size Group in Thousands of \$ of Gross Income

**FINBIN**

All farm size groups above experienced strong profitability levels in 2022. The biggest difference among the groups was the percentage of gross cash income that ended up being retained as accrual net income. The largest size group, farms with more than \$2,000,000 of gross revenue, had an average net income of around \$1,000,000 which is around 1/7th of their gross income. The smallest farm size group, farms with \$100,000 - \$250,000 of gross income, kept around 1/3rd of their gross revenue as net income.

### RETURNS ACROSS FARM SIZES

The chart below displays the average ROE and ROA across the various farm sizes. All farms experienced positive differences between ROE and ROA, indicating borrowed capital earned more than it cost. The largest farm size group, which has the highest average net income, had the lowest ROA and ROE levels.

**FINBIN**

## COMPARISONS ACROSS PROFITABILITY GROUPS

### INCOME ACROSS PROFITABILITY GROUPS

There is consistently a wide variation in the levels of profitability for farms in the association. The chart below displays the average gross cash income and accrual net income for the five profitability groups. The farms in the report are divided into 5 equal groupings based on their net farm income levels. This means the lowest profit farms for example are the 20% of farms that had the lowest level of net income. A quintile means a 1/5th or 20% of the data.

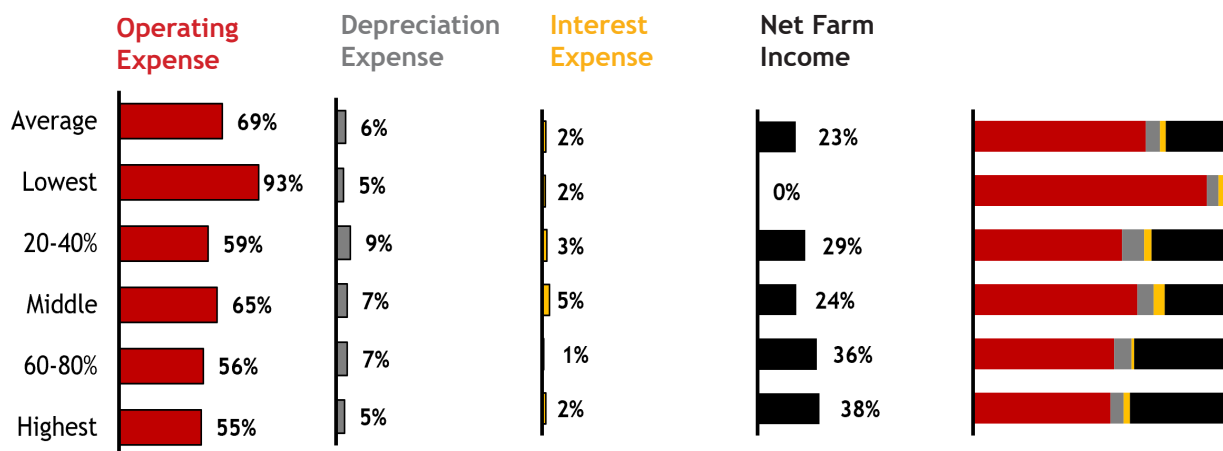

### 2022 Gross Income Compared to Net Income by Profit Group

It is quite typical for incomes, and any metric for that matter, to vary widely around the average. 2022 was no exception for farms in the association. The 20% of the 111 farms that were most profitable averaged a net farm income of \$955,030 in 2022. Meanwhile the least profitable 20% of the farms earned an average profit of just \$9,200. This is a decrease from 2021 and essentially brings this group to a breakeven level of profitability. An interesting note is how the lowest profit farms actually generated the largest amount of gross cash income. This is not a new phenomenon. We tend to see this in times of compressed margins. In 2022, many livestock operations saw low profitability given high feed costs and other inflationary pressures.

The chart below displays the four financial efficiency ratios across the profitability groups.

### Financial Efficiency Ratios by Profitability Groups

# WHOLE FARM REPORTS

---

The whole-farm reports summarize the financial performance of member farms in 2022. Each table includes the average of the 111 farms included in the report and the average 20 percent of the farms with the lowest and highest profits (based on Net Farm Income). Appendix I provides detail on how the whole-farm measures are calculated. Below is a short summary of the whole farm reports.

## FINANCIAL SUMMARY

The Financial Summary report provides a summary of the key financial measures and ratios included in the other detailed whole farm reports. All profitability and repayment capacity measures are based on accrual adjusted net farm income.

## FINANCIAL STANDARDS MEASURES

The Farm Financial Standards Council recommends farms use these seventeen ratios as standard measures of farm financial performance. Many are repeated from the Profitability, Liquidity, and Balance Sheet tables. For a complete description, see the Financial Guidelines for Agricultural Producers at <http://www.ffsc.org/index.php/order-the-guidelines/>.

## FARM INCOME STATEMENT

The Income Statement calculates the accrual Net Farm Income generated by the average farm for the year 2022. Net Farm Income is reported based on accrual adjustments to the cash income and expenses reported for the year. Net Farm Income is the income earned before any compensation for owner labor and management. If owner compensation was included in farm expenses, it has been excluded here to make all farms uniform. Net Farm Income represents the return to the operator's labor, management, and equity capital (net worth). It is the amount the farm contributed to owner family living, income taxes, and net worth growth. However, it does not include any asset appreciation, debt forgiveness or asset repossessions.

There were several different government programs that provided payments to farm operations in 2022.

- Crop government payments – Agriculture Risk Coverage (ARC); Price Loss Coverage (PLC).
- CRP payments – Conservation Reserve Program (CRP).
- Livestock government payments – Dairy Margin Coverage (DMC); Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program (ELAP); Livestock Forage Disaster Program (LFP); Pandemic Market Volatility Assistance Program (PMVAP); Emergency Livestock Relief Program (ELRP); Spot Market Hog Pandemic Program (SMHPP); and Agricultural Drought Relief Program (ADRoP) for MN livestock farms.
- Other government payments – loan amounts forgiven for Paycheck Protection Program (PPP); Emergency Relief Program (ERP); Agricultural Drought Relief Program (ADRoP) for MN specialty crop farms; & Pandemic Response & Safety Grants (PRS).

- Conservation government payments – Environmental Quality Incentives Program (EQIP) payments for annual production expenses; Conservation Stewardship Program (CSP); Soil Health & Income Protection Program (SHIPP); Grassland Reserve Program (GRP); and Pandemic Cover Crop Program (PCCP).

## **PROFITABILITY MEASURES**

The profitability measures are calculated based on both the cost value of assets and the market value. When calculated based on the market value of assets, the profitability measures can be compared to interest rates and returns available on alternative investments. When based on cost values, the returns more closely estimate the actual returns from the actual investment. (Cost values do not reflect the tax basis of farm assets. Instead, a method of calculating depreciation is used that estimates economic depreciation over the useful life of the assets.)

The *Rate of Return on Assets* (ROA) can be thought of as the interest rate earned by all investment in farm assets. *Rate of Return on Equity* (ROE) is the rate earned on the operator's equity or net worth in the farm business. If ROE is higher than ROA, borrowed funds more than paid for their cost in interest expense. *Operating Profit Margin* measures efficiency in farm operations. The higher the margin, the more of the farm income remained in pockets of the farm operator. *Asset Turnover Rate* measures efficiency in use of capital. Again, the higher the better. Farms with high investment in fixed assets will generally have a lower turnover rate than those who lease a major share of their capital.

## **LIQUIDITY AND REPAYMENT CAPACITY MEASURES**

Liquidity reflects the ability of the farm to meet its financial obligations on time. *Current Ratio* is current farm assets divided by current farm liabilities. *Working Capital* is current farm assets minus current farm liabilities. Businesses with more working capital are generally in a better position to overcome short-term financial downturns or production problems. *Working Capital to Gross Income* measures liquidity relative to business size. *Working Capital to Operating Expenses* measures liquidity relative to business expenses.

Repayment capacity measures the ability of the business to meet debt payments and replace capital assets. *Debt Coverage Ratio* and *Term Debt Coverage Ratio* measures the ability of the business to meet its scheduled debt payments. A debt coverage ratio greater than 1.0 indicates that the business produced more than enough earnings to meet its scheduled debt payments. *Replacement Coverage Ratio* adds the need for capital replacement. A replacement coverage ratio greater than 1.0 indicates that the business produced more than enough earnings to meet its payments and replace its depreciable assets.

## **BALANCE SHEETS**

Balance sheet reports are included for both the cost and market value of assets. Current assets are identical in both tables, with crop and livestock inventories generally valued at market value. This conforms to the methodology recommended by the Farm Financial Standards Council. On the cost-based table, intermediate and long-term assets are shown at depreciated value using estimated economic, rather than tax, depreciation. On the market table, they are valued at estimated market value.

Liabilities are the same on the cost and market tables except for the inclusion of *Deferred Liabilities* on the market statements. Deferred liabilities are the estimated taxes that would be paid if assets were liquidated at their market values.

*Net Worth Change* on the cost value table is the amount of earned net worth growth or loss for the year. Net worth change on the market value table includes both earned growth and changes in the market valuation of capital assets.

## **STATEMENT OF CASH FLOWS**

The Statement of Cash Flows displays the sources and uses of cash for the year. *Cash From Operating Activities* includes sources and uses of cash related to normal farm operations. *Cash From Investing Activities* reflects cash used to buy and sell capital assets. *Cash From Financing Activities* includes sources and uses of borrowed funds as well as cash from non-farm activities.

## **CROP PRODUCTION AND MARKETING**

This table reports farm size in acres farmed, average crop yields for major commodities, and average crop sales prices for the calendar year. Yields and prices are reported for the average of all farms for more commodities than those included in the High and Low columns because a minimum of five farms are required to report the yield or price for any group.

## **HOUSEHOLD AND PERSONAL EXPENSES**

This table reports family living and other non-farm expenditures. Only sole proprietors who keep detailed family living records are included.

## **OPERATOR AND LABOR INFORMATION**

All previous tables report results per farm, regardless of the number of families or operators involved in the operation. This report repeats several measures from previous tables on a *Per Operator* basis. It also summarizes estimated labor hours used and labor performance.

## **NON-FARM SUMMARY**

This table summarizes non-farm earnings for the average farm and details non-farm assets and liabilities.

## **PROJECTED PROFITABILITY**

Based on the past year's results and the authors' estimates of changes in next year's production, prices and costs, this page projects the financial performance of these farms in the coming year.

# PROJECTED PROFITABILITY

---

The Projected Profitability report displays actual results for Minnesota farms in 2022, along with projected financial results for 2023. Projected results are based on the authors' estimates of changes in revenue, operating expenses, interest rates, and asset values. Assumptions are displayed at the bottom of the page. All calculations include SW association farms, as well as farms enrolled in MN State Farm Business Management programs.

- **2022 All Farms Actual** – Average financial results for all 2,304 farms in 2022. Balance sheet measures reflect the average position of MN farms at the end of the year.
- **2022 Improved Margin Management** – Potential impacts of small changes in farm performance. If MN farms had, on average, improved sales by 5 % and cut costs by 5 %, the net farm income of the average farm would have increased by 36 %.
- **2022 Statewide Crop Farms Actual** – Average financial results for the 1,407 crop farms in the MN database for 2022.
- **2023 Statewide Crop Farms Projected** – Crop prices are expected to fall slightly in 2023. Along with this, operating expenses are projected to increase due to inflationary pressures, along with generally higher input and energy costs. Given this outlook MN crop producers are expected to have adequate profitability in 2023, down from 2022 levels.
- **2022 Statewide Livestock Farms Actual** – Average financial results for the 536 farmers in the statewide database who received a major portion of their income from livestock and milk sales for 2022.
- **2023 Statewide Livestock Farms Projected** – Statewide livestock farm profits are projected to decrease again in 2023, primarily due to higher feed and energy costs coupled with lower prices for much of the livestock sector. Dairy producers, the largest number of producers in this cohort, are expected to see much weaker profitability based on falling milk prices and sticky inputs. Hog producers are also expected to see decreased profitability given current projected pork prices. Beef producers will likely see improved profits for the year given stronger beef prices overall. Given this outlook, MN livestock producers on average are projected to see minimal profits for 2023.

The assumptions used to project these results are subjective. We offer these projections as the most likely scenario to help members consider management decisions in a period of tightening margins. Predictions are currently more challenging given inflationary pressures, global market uncertainty, and the expected later spring planting season upon Minnesota farmers.

# CROP REPORTS

---

The Crop Enterprise Analysis tables show the average physical production, gross return, direct costs, overhead costs, and net returns per acre. There are potentially three tables for each crop, depending on the farmer's tenure on the land: owned land, cash rented land, and share rented land. Farms are classified into low 20 percent or high 20 percent based on net return per acre. The classification is done separately for each table.

*Gross Return per Acre* includes the value of the crop produced plus any other income directly associated with production of the crop, including hedging gains or losses, crop insurance proceeds and any disaster payments that might have been received. It does not include government payments that are decoupled from production such as ARC and PLC payments (see *Net Return with Government Payments*). Government payments included as other income in 2022 crop enterprise analysis reports include EQIP or CSP payments received to offset annual production expenses and PCCP payments for cover crop practices.

The *Value per Unit* is assigned by the producer. For cash crops, the value is based on the actual sales price for production sold or contracted before year-end and the inventory value for crops still in inventory at year-end. The local harvest-time price is used for forages and other feed crops.

*Net Return per Acre* is the amount contributed toward operator labor, management, and equity capital. Any wages and benefits paid to the operator are removed from labor costs (and added to *Labor and Management Charge*) so that all farms are on equal footing. Land costs include land rent on the rented land pages, but only actual interest paid and real estate taxes on owned land. For this reason, net returns from owned and rented land should not be compared.

*Net Return with Government Payments* is the net return per acre after decoupled government payments such as ARC and PLC payments have been added. These payments are generally allocated evenly per acre across all crops except vegetables and pasture.

*Net Return Over Labor and Management* is the return, including government payments, remaining after deducting an opportunity cost for unpaid operator labor and management. This is the per acre return to equity capital.

*Cost of Production* shows the average cost per unit produced in each cost category. *Total Direct and Overhead Expense per Unit* is the breakeven price needed to cover cash costs and depreciation. *Less Government and Other Income* is the breakeven price if government payments and any miscellaneous income are used to offset some expenses. *With Labor and Management* is the breakeven price to provide a labor and management return for the operator(s).

*Machinery Cost per Acre* includes fuel and oil, repairs, custom hire, machinery lease payments, machinery depreciation, and interest on intermediate debt.

Note: The following government payments received by crop producers were not included in the enterprise analysis.

- Emergency Relief Program (ERP) – There were funds producers received for natural disaster related losses during 2020 and 2021. These payments did not related to 2022 production and were not included in the corresponding crop enterprise analysis.
- Other government program payments not directly related to conventional crop production including: amounts of PPP loans forgiven, Agricultural Drought Relief Program (ADRoP) for MN specialty crop producers, and Pandemic Response and Safety (PRS) grants for specialty crop producers.

# LIVESTOCK REPORTS

---

The Livestock Enterprise Analysis tables show the average physical production, gross margin over purchase costs, direct costs, overhead costs, and net returns per unit.

**The livestock enterprise summaries include data from both Southwest Minnesota Farm Management Association farms and Minnesota State Farm Business Management program farms. This provides a greater numbers of farms reporting for each enterprise, providing more accurate benchmark information. Minnesota State FBM programs are distributed across the state and include over 2,300 participating farms. We want to thank the Minnesota State FBM program and participating producers for making this data available to be included in this report.**

The "Dairy" table, if included, contains the information for only the milking herd (which includes dry cows). "Dairy Replacement Heifers" are those heifers kept for replacement into the milking herd. The "Dairy and Replacement Heifers" table is for the whole herd and includes those farms in the "Dairy" and "Dairy Replacement Heifers" tables; it does not include "Dairy Steers."

*Gross Margin* is the accrual gross value added by the enterprise. It includes income from sale of offspring and livestock products, cull income, non-cash transfers to other enterprises, and the value of production used in the home or for feed. It also includes the value of inventory change from beginning to the end of the year. The cost of livestock purchased, and the value of animals transferred in are deducted. Lastly, other income sources, like government payment income, are included in the gross margin calculation. Government program payments included in the 2022 analysis, for eligible livestock, include DMC payments; and EQIP and/or CSP funds received for annual production expenses.

*Net Return* is the amount contributed by the enterprise toward operator labor, management, and equity capital. Any wages and benefits paid to the operator are removed from labor costs (and added to *Labor and Management Charge*) so that all farms are on equal footing.

*Net Return Over Labor and Management* is the return remaining after deducting an opportunity cost for unpaid labor and management. This is the return to equity capital.

*Cost of Production* shows the average cost per unit sold in each cost category. *Total direct and overhead expense per unit* is the breakeven price needed to cover cash costs and depreciation. For grow/finish enterprises, this includes the purchase cost or transfer in value of the animal. *With other revenue adjustments* is the breakeven price adjusted for cull sales, other offspring sales, the cost of replacement stock, and any other miscellaneous income. This assumes that some costs can be covered by these other income sources. *With labor and management* is the final breakeven price to provide a labor and management return for the operator(s).

*Other Information* contains both economic and technical efficiency measures for each enterprise.

Rounding of individual items for the report may have caused minor discrepancies with the calculated totals. If fewer than five farms have a certain livestock enterprise, that

information is not reported. If there are fewer than 5 farms, the high and low groups are not reported.

Note: The following government payments received by livestock producers in 2022 were not included in the enterprise analysis.

- Emergency Assistance for Livestock, Honeybees & Farm-Raised Fish Program (ELAP) – these payments were received for losses related to transporting water or feed because of drought conditions or other eligible program disaster emergencies for parts of MN in 2021.
- Livestock Forage Disaster Program (LFP) – this is another program related to the drought declaration in 2021.
- Pandemic Market Volatility Assistance Program (PMVAP) – these funds received by dairy producers related to losses experienced in 2020 related to the pandemic.
- Emergency Livestock Relief Program (ELRP) – this program provided funds for the increased cost of supplemental feed for livestock producers because of forage losses experienced in the 2021 drought.
- Agricultural Drought Relief Program (ADRoP) for MN livestock producers – this program provided relief funding for Minnesota livestock producers for the drought-related expenses they incurred in 2021.
- Pandemic Response and Safety (PRS) grant program – this program provided grant funds for coronavirus related needs dating back to 2020.
- Spot Market Hog Pandemic Program (SMHPP) payments – this program provided funding for losses related to spot market sales during the 2020 pandemic.
- Other government program payments not directly related to livestock production included amounts of PPP loans forgiven.

# SUMMARY TABLES

---

## FINANCIAL SUMMARY BY YEARS

A better picture of the current financial performance can be seen by comparing this year to previous years in the *Summary by Years* table. All items are taken from the annual report for that year. Monetary values are left in nominal terms unadjusted for inflation. The one exception is the *Net Farm Income (Constant \$)* using the Consumer Price Index (CPI-U) from the U. S. Department of Commerce. This shows the changes in “buying power” for the farmers, compared to the current year. The CPI used is reported below.

<u>Year</u>	<u>CPI-U</u> <u>1982-84=100</u>	<u>Year</u>	<u>CPI-U</u> <u>1982-84=100</u>
1999	166.6	2011	224.9
2000	172.2	2012	229.6
2001	177.1	2013	233.0
2002	179.9	2014	236.7
2003	184.0	2015	237.0
2004	188.9	2016	240.0
2005	195.3	2017	245.1
2006	201.6	2018	251.1
2007	207.3	2019	255.7
2008	215.3	2020	258.8
2009	214.5	2021	271.0
2010	218.1	2022	292.7

## FINANCIAL SUMMARY BY FARM SIZE (GROSS FARM INCOME)

This table summarizes whole-farm financial performance by size of farm. Farms are categorized based on gross farm income.

## FINANCIAL SUMMARY BY FARM TYPE

This table summarizes whole-farm financial performance by type of farm. Farm type is assigned based on greater than 70 percent of sales from that commodity or combination of commodities.

## FINANCIAL SUMMARY BY DEBT TO ASSET RATIO

This table summarizes whole-farm financial performance by debt level. Farms are categorized based on total farm and non-farm debt to asset ratio.

## FINANCIAL SUMMARY BY AGE OF OPERATOR

This table summarizes whole-farm financial performance based on age of the primary operator.

# Appendix I

## WHOLE FARM ANALYSIS PROCEDURES & MEASURES

---

The whole-farm reports include summary financial statements and measures for all farms included in this report. Rounding of individual items may have caused minor discrepancies between those items and the printed totals which are calculated before rounding.

### **FINANCIAL SUMMARY**

This table summarizes key measures reported in several of the following tables.

#### **Income Statement**

This section summarizes key totals from the Income Statement table. *Average Net Farm Income* is the mean or average farm earnings of the group calculated on an accrual adjusted basis. *Median Net Farm Income* is the farm earnings of the median or middle farm in the group. If it is lower than the average, the average earnings are skewed because some farms had much higher earnings than the rest of the group. If it is higher than the average, the average earnings are skewed because some farms had much lower earnings than the rest of the group.

#### **Profitability**

See the Profitability Measures section below for an explanation of these measures.

#### **Liquidity and Repayment**

See the Financial Standards Measures and Liquidity Measures sections below for an explanation of these measures.

#### **Solvency**

This section summarizes key measures from the Balance Sheet reports.

#### **Non-Farm Information**

This section summarizes non-farm earnings for all farms and family living withdrawals for those sole proprietors who kept accurate family living records. More detail is included on the Household and Personal Expenses and Non-Farm Summary pages.

#### **Crop Acres**

This section summarizes acres used for cropping from the Crop Production and Marketing table.

## FINANCIAL STANDARDS MEASURES

This table contains the Farm Financial Standards Council's 17 financial measures for evaluating a farm's financial position and performance.

### Liquidity

*Current Ratio* is total *Current Assets* divided by total *Current Liabilities*.

*Working Capital to Gross Income* is *Working Capital* divided by *Gross Revenues (accrual)*.

*Working Capital to Operating Expenses* is *Working Capital* divided by *Total Operating Expense (accrual)* less *Depreciation and Amortization*.

### Solvency

*Farm Debt to Asset Ratio* is calculated by dividing the total farm liabilities by the total farm assets. It measures the proportion of farm assets financed by debt capital.

*Farm Equity to Asset Ratio* is calculated by dividing farm equity or net worth by the total farm assets. It measures the proportion of the farm assets financed by the owner's equity as opposed to debt. This is the opposite of the debt to asset ratio. These two measures always add up to 100 percent because they describe how total farm assets are financed.

*Farm Debt to Equity Ratio* measures farm debt relative to farm equity. It is calculated by dividing the total farm liabilities by the total farm net worth. The debt to equity ratio measures the amount of borrowed capital being employed for every dollar of equity capital.

### Profitability

*Rate of Return on Farm Assets* can be thought of as the average interest rate being earned on all investments in the farm or ranch business. If assets are valued at market value, the rate of return on assets can be looked at as the "opportunity cost" of farming versus alternate investments. If assets are valued at cost value, the rate of return on assets more closely represents the actual return on the average dollar invested in the farm. The rate of return on farm assets is calculated as follows:  $\text{Rate of Return on Assets} = \frac{\text{Return on Farm Assets}}{\text{Average Farm Investment}}$ , where:  $\text{Return on Farm Assets} = \text{Net Farm Income} + \text{Farm Interest} - \text{Value of Operator's Labor \& Management}$ , and  $\text{Average Farm Investment} = \frac{(\text{Beginning Total Farm Assets} + \text{Ending Total Farm Assets})}{2}$ .

*Rate of Return on Farm Equity* represents the interest rate being earned on farm net worth. If assets are valued at market value, this return can be compared to returns available if the assets were liquidated and invested in alternate investments. If assets are valued at cost value, this more closely represents the actual return on the funds that have been invested or retained in the business. The rate of return on farm equity is calculated as follows:  $\text{Rate of Return on Equity} = \frac{\text{Return on Farm Equity}}{\text{Average Farm Net Worth}}$ , where:  $\text{Return on Farm Equity} = \text{Net Farm Income} - \text{Value of Operator's Labor \& Management}$ , and  $\text{Average Farm Net Worth} = \frac{(\text{Beginning Farm Net Worth} + \text{Ending Farm Net Worth})}{2}$ .

*Operating Profit Margin Ratio* is a measure of the operating efficiency of the business. It is calculated as follows:  $\text{Operating Profit Margin} = \text{Return to Farm Assets} \div \text{Value of Farm Production}$ . If expenses are held in line relative to the value of output produced, the farm will have a healthy operating profit margin. A low net profit margin may be caused by low prices, high operating expenses, or inefficient production.

*Asset Turnover Ratio* is a measure of efficiency in using capital. It is calculated as follows:  $\text{Asset Turnover Ratio} = \text{Value of Farm Production} \div \text{Total Farm Assets}$ .

## **Repayment Capacity**

*Debt Coverage Ratio* is *Repayment and Replacement Capacity* divided by *Total Debt Repayment*. This is how many times total debt repayment is covered by repayment and replacement capacity. A ratio greater than 1.0 indicates the business generated enough income to pay all term debt payments and cover an allowance for capital replacement.

*Replacement Coverage Ratio* *Repayment and Replacement Capacity* divided by the total of *Total Debt Repayment* and *Unfunded Capital Expenditures*. This represents how many times scheduled payments and cash replacement needs are covered by repayment capacity.

*Term Debt Coverage Ratio* is *Term Debt Repayment and Replacement Capacity* divided by *Total Principal and Interest on Term Debt and Finance Leases*. This is how many times scheduled payments are covered by term debt repayment capacity. A ratio greater than 1.0 indicates the business generated enough income to pay all term debt payments and cover an allowance for capital replacement.

## **Efficiency**

The last four ratios reflect the distribution of gross income to cover operating expenses and generate farm income. The sum of the operating expense ratio, the depreciation expense ratio, and the interest expense ratio equals the percent of gross income used to pay business expenses. The amount remaining is net farm income. The gross farm income used to calculate these ratios is the accrual gross farm income.

*Operating Expense Ratio* is calculated as  $(\text{Total Farm Operating Expense} - \text{Farm Interest Expense}) \div \text{Gross Farm Income}$ . This ratio indicates the percent of the gross farm income that was used to pay operating expenses. Total farm operating expense is the accrual total operating expense.

*Depreciation Expense Ratio* is calculated as  $\text{Depreciation} \div \text{Gross Farm Income}$ . This ratio indicates the percent of the gross farm income that was used to cover depreciation and other capital adjustments.

*Interest Expense Ratio* is calculated as  $\text{Farm Interest Expense} \div \text{Gross Farm Income}$ . This ratio indicates the percent of the gross farm income used for farm interest expenses. This is the same ratio as the accrual interest as a percent of income from the Liquidity table.

*Net Farm Income Ratio* is calculated as  $\text{Net Farm Income} \div \text{Gross Farm Income}$ . This ratio indicates the percent of the gross farm income that remained after all expenses.

## FARM INCOME STATEMENT

The Farm Income Statement is a summary of income, expenses, and resultant profit or loss from farming operations during the calendar year. The first section lists cash farm income from all sources. The second section lists cash expenses. "Interest" includes only interest actually paid. No opportunity charges on farm equity capital or unpaid labor are included. The difference between *Gross Cash Farm Income* and *Total Cash Expense* is the *Net Cash Farm Income*. This is net farm income on a cash basis.

The third and fourth sections deal with noncash changes in the farm business. The *Inventory Changes* and *Depreciation* sections are used to convert the cash income statement (Net Cash Farm Income) derived from the first two sections into an accrual income statement. The resulting "Net Farm Income" represents the return to the operator's and family's unpaid labor, management, and equity capital (net worth). In other words, it represents the return to all of the resources which are owned by the farm family and, hence, not purchased or paid a wage. However, it does not include any asset appreciation, debt forgiveness or asset repossessions.

## PROFITABILITY MEASURES

Profitability is measured using assets valued first at cost and then at market. The reports include five measures of profit followed by the values used to calculate the measures.

*Net Farm Income* is repeated from the Farm Income Statement report. When assets are valued at market, it includes the change in market valuation of capital for the year.

*Rate of Return on Assets* is the *Return to Farm Assets* divided by *Average Farm Assets*.

*Rate of Return on Equity* is the *Return to Farm Equity* divided by *Average Farm Equity*.

*Operating Profit Margin Ratio* is the *Return to Farm Assets* divided by *Value of Farm Production*.

*Asset Turnover Rate* is the *Value of Farm Production* divided by *Average Farm Assets*.

*Farm Interest Expense* is the accrued interest cost so it will be different from the cash interest paid shown in the Farm Income Statement.

*Value of Operator's Labor and Management* is its opportunity cost. It is assigned by farm within suggested guidelines.

*Return on Farm Assets* is calculated by adding *Farm Interest Expense* and *Net Farm Income* and then subtracting the *Value of Operator's Labor and Management*.

*Average Farm Assets* is the average of beginning and ending total farm assets for all farms, not just those included in the Balance Sheet report.

*Return to Farm Equity* is calculated by subtracting the *Value of Operator's Labor and Management* from *Net Farm Income*.

*Average Farm Equity* is the average of beginning and ending farm net worth.  
*Value of Farm Production* is gross farm income minus feeder livestock and feed purchased and adjusted for inventory changes in crops, market livestock and breeding livestock.

## **LIQUIDITY AND REPAYMENT CAPACITY MEASURES**

*Current Ratio* is total *Current Assets* divided by total *Current Liabilities*.

*Working Capital* is total *Current Assets* minus total *Current Liabilities*.

*Working Capital to Gross Income* is *Working Capital* divided by *Gross Revenues (accrual)*.

*Working Capital to Operating Expenses* is *Working Capital* divided by *Total Operating Expense (accrual)* less *Depreciation and Amortization*.

*Current Assets* are taken from the ending balance sheet and include all assets that will be sold or used up in production within one business year.

*Current Liabilities* are taken from the ending balance sheet and include all loans and other debt due to be repaid within one business year. Principal due within twelve months on intermediate and long-term loans is included.

*Gross Revenue (accrual)* is gross cash farm income from the income statement adjusted for inventory changes in crops and feed, market livestock, accounts receivable, hedging accounts, breeding livestock and other income related inventories.

*Net Farm Income from Operations* is from the Income Statement.

*Depreciation* is the total depreciation from the Income Statement. It is added as a source of repayment because it is a non-cash expense that was subtracted to arrive at *Net Farm Income from Operations*.

*Personal Income* is the average for all farms, not including *Gifts and Inheritances*.

*Family Living/Owner Withdrawals* is the amount of owner withdrawals for family living, partnership withdrawals, and corporate dividends. Reported withdrawals are adjusted to include any discrepancy with actual cash disappearance.

*Payments on personal debt* is the total principal payments made during the year on all non-farm loans.

*Income Taxes Paid* are total federal, state, and social security taxes paid during the year on farm and personal earnings.

*Interest on Term Debt* is the amount of interest paid on intermediate and long-term loans during the year. Interest is added as a source of repayment because it was previously subtracted to arrive at *Net Farm Income from Operations*.

*Repayment and Replacement Capacity* is *Income from Operations*, plus or minus *miscellaneous revenue and expenses plus Depreciation*, and *Personal Income*, minus *Family Living/Owner Withdrawals*, and *Income Taxes Paid*. This represents total earnings available for debt repayment and cash capital replacement.

*Term Debt Repayment and Replacement Capacity* is *Repayment and Replacement Capacity* minus *Interest Expense on Current Debt*.

*Total Principal and Interest on Term Debt and Finance Leases* is the *Prior Year Current Portion of Long-Term Debt* plus *prior year current portion of Finance Leases* plus *Interest Expense on Term Debt* plus *Interest Expense on Finance Leases*. This is essentially the scheduled amount of principal and interest payments due on intermediate and long-term loans from the beginning balance sheet.

*Total Debt Repayment* is *Total Principal and Interest on Term Debt and Finance Leases* plus *Interest Expense on Current Debt* plus *Payment on Unpaid Operating Debt from Prior Periods (Loss Carryover)* plus *Annual Payment on Personal Liabilities*. This is essentially the scheduled amount of principal and interest payments due on intermediate and long-term loans from the beginning balance sheet plus current liability interest expense.

*Repayment Margin* is *Repayment and Replacement Capacity* minus *Total Debt Repayment*. This is the amount by which earnings available for debt repayment exceeded payments due.

*Unfunded Capital Expenditures* are the estimated amount of cash needed to cover the portion of capital replacement needs that normally come from cash flow. It is estimated for each operator based on their financial structure.

*Replacement Margin* is *Repayment Margin* minus *Unfunded Capital Expenditures*. This is the amount by which earnings available for debt repayment and replacement exceed payments due and cash replacement needs.

*Debt Coverage Ratio* is *Repayment and Replacement Capacity* divided by *Total Debt Repayment*. This is how many times total debt repayment is covered by repayment and replacement capacity.

*Term Debt Coverage Ratio* is *Term Debt Repayment and Replacement Capacity* divided by *Total Principal and Interest on Term Debt and Finance Leases*. This is how many times scheduled payments are covered by term debt repayment capacity.

*Replacement Coverage Ratio* *Repayment and Replacement Capacity* divided by the total of *Total Debt Repayment* and *Unfunded Capital Expenditures*. This represents how many times scheduled payments and cash replacement needs are covered by repayment capacity.

## **BALANCE SHEETS AT COST AND MARKET VALUES**

These tables include all farm and personal assets and liabilities reported by these farms on their beginning and ending balance sheets. Government crop loans are treated consistently as loans on these tables, meaning that the full asset value is included as an asset and total accrued interest and outstanding principal balances are included as liabilities. Capital assets are valued at original purchase price minus economic depreciation on the Cost Value table. Assets are valued at a conservative market value on the Market Value table. Deferred liabilities are included on the Market Value table. Deferred liabilities are an estimate of the taxes that would be due if the business was liquidated on the date of the balance sheet.

## **STATEMENT OF CASH FLOWS**

This table reports the sources from which cash was available or obtained and where that cash was used or remains at the end of the year.

## **CROP PRODUCTION AND MARKETING SUMMARY**

This table contains three sections. The first section reports average acreage by tenure and general use. The next two sections show average price received from cash sales and average yields for major crops.

## **HOUSEHOLD AND PERSONAL EXPENSES**

For those farms that kept records, the household and personal expenses are summarized in this table. Since not all farms keep these records, the number of farms may be different for each group. Averages are determined by the number of farms keeping these records.

## **OPERATOR AND LABOR INFORMATION**

This table has four sections. The first reports the averages for the number of operators per farm, the operator's age, and the number of years farming. The second section reports various measures and results per operator compared to per farm in other reports.

The third section reports the amount of labor used and the returns to that labor. *Total Unpaid Labor Hours* and *Total Hired Labor Hours* are based on farmers' estimates of labor

use. No labor records are kept for unpaid labor. *Value of Farm Production/Hour* is the *Value of Farm Production* divided by *Total Labor Hours per Farm*. *Net Farm Income/Unpaid Hour* is *Net Farm Income* divided by *Total Unpaid Labor Hours*.

The fourth section reports the number of partnerships and withdrawals in each grouping.

## **NON-FARM SUMMARY**

This table reports the income from non-farm sources which is included in a farmer's total net income. Not all farms have non-farm income, but the figure reported is the average over all farms, not just those reporting non-farm income. Also reported are the beginning and ending values for non-farm assets for all farms (not just sole proprietors).

## Appendix II

# CROP ENTERPRISE ANALYSIS PROCEDURES & MEASURES

---

The Crop Enterprise Analysis tables show the profitability of each crop enterprise produced by five or more farms.

*Gross Return* is the *Average Yield* multiplied by the *Value Per Unit* plus any other production or income related to the crop. *Value Per Unit* for cash crops is the average sales price for crops sold before the end of the year and the average ending inventory value for crops remaining unsold. For feed crops, it is the estimated harvest-time value. Other commodity-specific income is added to estimate the total value received for crop production.

*Direct Expenses* include expenses that are directly related to the production of the specific crop. Most direct expenses are directly assigned to production of the crop and simply divided by acres. Some, such as fuel and oil and repairs, which are difficult to assign directly to specific fields or crops, are determined by allocating the total annual expense across all enterprises using allocation factors entered for each crop.

*Overhead Expenses* are also determined by allocating the total annual expense across all enterprises using allocation factors entered for each crop.

*Net Return per Acre* is the *Gross Return per Acre* minus *Total Direct and Overhead Expenses*.

*Net Return with Government Payments* is *Net Return per Acre* plus *Government Payments*. *Government Payments* includes only direct payments and counter-cyclical payments. Payments that are directly attached to production of the crop, such as LDP and disaster payments are included in *Gross Return*. Because direct government payments have been decoupled from actual production, these payments are generally allocated to all crops excluding vegetables and pasture. This is done for each farm by allocating the direct payments from the whole farm to these crops.

*Net Return over Labor and Management* is calculated by allocating the farmer's charge for unpaid labor and management across all enterprises and subtracting it from *Net Return with Government Payments*.

*Cost of Production* is calculated by dividing the total expense for each category by the yield per acre. *Total Expense Less Government and Other Income* is total expense minus government payments, income from secondary products, and other income, divided by yield per acre.

*Machinery Cost Per Acre* is the sum of fuel and oil, repairs, custom hire expense, machinery lease payments, machinery depreciation, and interest on intermediate debt divided by acres.

*Estimated Labor Hours Per Acre* is calculated by allocating the farmer's estimate of total operator and hired labor hours for the year across all enterprises.

Rounding of individual items for the report may have caused minor discrepancies with the calculated totals. If fewer than five farms have a certain crop enterprise, that information is not reported. If there are fewer than 5 farms, the high and low groups are not reported.

# Appendix III

## LIVESTOCK ENTERPRISE ANALYSIS

### PROCEDURES & MEASURES

---

The Livestock Enterprise Analysis tables show the profitability of each livestock enterprise produced by five or more farms.

*Gross Margin* includes product and livestock sales, cull sales, the value of offspring transferred out of the enterprise, the value of inventory change from beginning to end of year, and any other income assigned to the enterprise. Livestock purchases and the value of animals transferred in from other enterprises are subtracted.

*Direct Expenses* include expenses that are directly related to the specific livestock enterprise. Feed and most other direct expenses are directly assigned based on farm records. Some, such as fuel and oil and repairs, which are difficult to assign directly to enterprises, are determined by allocating the total annual expense across all enterprises using allocation factors entered for each farm.

*Overhead Expenses* are also determined by allocating the total annual expense across all enterprises using allocation factors entered for each farm.

*Net Return* is the *Gross Return* minus *Total Direct and Overhead Expenses*.

*Net Return over Labor and Management* is calculated by allocating the farmer's charge for unpaid labor and management across all enterprises and subtracting it from *Net Return*.

*Estimated Labor Hours* are calculated by allocating the farmer's estimate of total operator and hired labor hours for the year across all enterprises.

*Cost of Production* is calculated by dividing the total expense for each category by total production. For grow/finish enterprises, the Purchases and Transfers In are included in direct expense. Cull sales, other offspring sales, and any other miscellaneous income are subtracted and replacement purchases and transfers in are added to arrive at the cost *with other revenue adjustments*. *With Labor and Management* is the cost with other revenue adjustments plus the producer's charge for operator's labor and management. This is the breakeven price for the primary product to provide a return for operator labor and management.

The last section of each livestock table contains both economic and technical efficiency measures. *Lbs. of feed per lbs. of grain* is the pounds of total feed divided by total production. For grains, these pounds per bushel are used: corn, 56; oats, 32; barley, 48; grain sorghum, 56; wheat, 60; and millet, 48. For these forages, the units are converted to

pounds and then adjusted by these factors: alfalfa haylage, 0.5; corn silage, 0.33; oatlage, 0.5; sorghum silage, 0.33; and small grain silage, 0.33.

The calving and weaning percentages are calculated as the number of calves which are calved and weaned, respectively, divided by the number of cows which are supposed to bear young.

Rounding of individual items for the report may have caused minor discrepancies with the calculated totals. If fewer than five farms have a certain livestock enterprise, that information is not reported. If there are fewer than 5 farms, the high and low groups are not reported.

## Appendix IV

# PRICES USED IN THE ANALYSIS REPORT

---

Item	(1/1/22) Beginning Inventory	Feed	Ending (1/1/23) Inventory
All Corn/bu.	\$5.95	\$7.10	\$6.83
Oats/bu.	6.76	5.66	4.11
All Wheat/bu.	9.60	9.16	8.98
Soybeans/bu.	13.20	14.78	14.82
Alfalfa hay/t. (avg quality)	\$196	\$196	\$225
Alfalfa haylage/t	84	84	97
Grass/Mixed hay/t	148	169	180
Corn silage/t.	48	57	55
Oats straw/bale/ton	\$3.75/125	\$4/150	\$4/150
Cornstalks/t.	30	30	50
Oatlage/t.	38	45	44

---

Enterprise production is valued at actual selling price if sold or contracted, inventory price for balance. All feeds are valued on an as fed moisture basis.

---

### **OTHER PRICES USED:**

Pasture: \$55.00/acre (adjusted for quality and carrying capacity)  
 Value of milk fed calves: \$ 1.50/gallon

Depreciation is calculated by using a 5 percent rate for buildings, 10 percent for machinery, 20 percent for beef cattle and sheep and 33 percent for breeding hogs and dairy cows. The economic depreciation is calculated by taking the beginning cost (book) value, plus new purchases (book), less book value of sold items multiplied by the appropriate percentage rate.

Value of unpaid operator's labor is calculated by using this formula: For sole proprietors and partnerships, labor and management is valued at \$30,000 per operator plus 5 percent of the value of farm production, with a minimum of \$35,000 for a full-time farm operator. This value is used in calculating ROA, ROE and other whole farm ratios and is also allocated as an opportunity cost to crop and livestock enterprises.

UNIVERSITY OF MINNESOTA  
**EXTENSION**

The University of Minnesota is committed to the policy that all persons shall have equal access to its programs, facilities, and employment without regard to race, color, creed, religion, national origin, sex, age, marital status, disability, public assistance status, veteran status, or sexual orientation.

Information on other titles in this series may be obtained from Waite Library, University of Minnesota, Department of Applied Economics, 1994 Buford Avenue, 232 Ruttan Hall, St. Paul, MN 55108-6040, U.S.A. The Waite Library e-mail address is: [lle@umn.edu](mailto:lle@umn.edu). This paper is available electronically from AgEcon Search at <http://ageconsearch.umn.edu>.
